Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/719,834

Applicant(s)

EASTMAN, MICHAEL ANTHONY

Examiner

Shian T. Luong

Art Unit

3728

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-11 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 9 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The phrase “said reflective surface is secured within the basin by the compression forces toward center of the depth of said basin against the depth of said reflective surface” had no support in the original specification. The specification only disclosed adhering or embedding the reflective surface into the closure cap. The adhesion or the step of embedding does not necessarily require any compression force toward center of the basin. Clarification is required.

3. Claim 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, it is not clear whether the reflective surface on line 6 is the same as the reflective outer surface on line 5 or the reflective surface covering on line 4. Also, the term “said basin” on line 6 lacks proper antecedent basis. Also, while claim 1 has the term “said basin”, claim 4 introduces the term “a basin” when it depends from claim 1. In claim 6, the term “each reservoir” is not appropriate if there is only one reservoir. Applicant should define the reservoir as “said at least one said reservoir.” In claim 9, the phrase “said reflective surface is secured within the basin by the compression forces toward center of the depth of said basin against the

Art Unit: 3728

depth of said reflective surface” is not definite because it is not clear what compression force is exerted toward center of the depth of the basin. In claim 10, the term “threaded reservoir” is confusing and indefinite. It is not certain what applicant intends to claim by such term. The disclosure only shows a reservoir with threads on its outer surface. In claim 11, “said threads” lacks proper antecedent basis. Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Speshyock et al. (US 3,211,281). Speshyock et al. discloses a contact lens case comprising a base 1 and a cover 2. At least one reservoir or the receptacle compartment on the top side of the base and having an outer surface. A reflective surface 5 covering for the outer surface of the cover and having a reflective outer surface. The cover has a basin and the reflective surface has a depth less than the basin depth. The depth of the basin is from the top surface of the cover to element 5'. The mirror is the thin piece within the basin as shown in Figure 3.

6. Claim 6 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Speshyock et al or Speshyock in view of Girard (US 2,650,597) or Ament (US 1,655,452). Speshyock has a basin for receiving the mirror. The mirror appears to be attached to the basin, but in the event that it is not attached, it would have

Art Unit: 3728

been obvious to secure the mirror to prevent it from inadvertent removal from the basin. Girard and Ament show this type of attachment. Girard teaches providing a mirror on the cap portion with the mirror embedded within a basin. The basin has a depth deeper than the mirror in order to receive the mirror. Ament also teaches a cap 3,4 with a basin that stores a mirror 5 therein.

The basin is the area from the top surface to the element 9.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ulmer et al. (US 3,822,780) in view of Girard and/or Ament.

Ulmer et al. discloses a contact lens case for storing contact lenses comprising a base 18 having a top side. A least one reservoir on the top side of the base and having an outer surface with threads. A cap 14 for the reservoir and is attached to the outer surface of the reservoir by threads. A reflective surface covering 60 is on the outer surface of the cap. Ulmer on column 5, lines 35-38 discussed the adoption of the mirror on a portion of the outside surface of the container but does not disclose how the mirror is formed on the outer surface. However, Girard teaches providing a mirror on a cap portion with the mirror embedded within a basin. The basin has a depth deeper than the mirror in order to receive the mirror. Ament also teaches a cap 3,4 with a basin that stores a mirror 5 therein. The basin is the area from the top surface to the

Art Unit: 3728

element 9. The mirror is spun or crimped or suitably secured to the cap. Therefore, it would have been obvious in view of Girard and/or Ament to secure the mirror within the basin by any suitable attachment means such by embedding or crimping the mirror therein.

9. Claims 1,4,5 are rejected under 35 U.S.C. 103(a) as being unpatentable over De Meo (Des 358,477) in view of Girard and/or Ament and/or Official Notice

D Meo discloses a contact lens case for storing contact lenses comprising a base having a top side. A least one reservoir on the top side of the base and having an outer surface. A cap for the reservoir is attached to the outer surface of the reservoir. De Meo appears to have a reflective surface on the cap. But in the event that De Meo does not have a reflective surface and a basin, Girard teaches providing a mirror on a cap portion with the mirror embedded within a basin. The basin has a depth deeper than the mirror in order to receive the mirror. The mirror is for application of content. Ament also teaches a cap 3,4 with a basin that stores a mirror 5 therein. The basin is the area from the top surface to the element 9. The mirror is spun or crimped or suitably secured to the cap. Therefore, it would have been obvious in view of Girard and/or Ament to secure the mirror within the cap by any suitable attachment means such by embedding or crimping the mirror therein.

10. Claims 2-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over the references applied above with respect to claim 1 above, further in view of Lin (US)

De Meo does not disclose whether the base and cap are engaged by threads. However, it is conventionally known to engage the cap to the base of a contact lens container by threads. This is shown by Lin as element 102,202.

Art Unit: 3728

11. Claims 6-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over De Meo (Des 358,477) in view of Girard and/or Ament and Lin

D Meo discloses a contact lens case for storing contact lenses comprising a base having a top side. A least one reservoir on the top side of the base and having an outer surface. A cap for the reservoir is attached to the outer surface of the reservoir. De Meo appears to have a reflective surface on the cap. But in the event that De Meo does not have a reflective surface and a basin, Girard teaches providing a mirror on a cap portion with the mirror embedded within a basin. The basin has a depth deeper than the mirror in order to receive the mirror. The mirror is for application of content. Ament also teaches a cap 3,4 with a basin that stores a mirror 5 therein. The basin is the area from the top surface to the element 9. The mirror is spun or crimped or suitably secured to the cap. Therefore, it would have been obvious in view of Girard and/or Ament to secure the mirror within the cap by any suitable attachment means such by embedding or crimping the mirror therein.

De Meo does not disclose whether the base and cap are engaged by threads. However, it is conventionally known to engage the cap to the base. This is shown by Lin as element 102,202.

Conclusion

12. Telephone inquiries regarding the status of applications or other general questions, by persons entitled to the information, should be directed to the group clerical personnel and not to the examiners. In as much as the official records and applications are located in the clerical

Art Unit: 3728

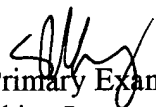

section of the examining groups, the clerical personnel can readily provide status information without contacting the examiners, M.P.E.P. 203.08.

If in receiving this Office Action it is apparent to applicant that certain documents are missing, e.g., copies of references cited, form PTO-1449, form PTO-892, etc., requests for copies of such papers should be directed to Erica Miller at (571) 272-4370.

For applicant's convenience, the official FAX number is 571-273-8300. This practice may be used for filing papers not requiring a fee. It may also be used for filing papers which require a fee by applicants who authorize charges to a PTO deposit account. Please identify Examiner Luong of Art Unit 3728 at the top of your cover sheet of any correspondence submitted.

Inquiries concerning the merits of the examination should be directed to Shian Luong whose telephone number is (571) 272-4557. The examiner can normally be reached on M-H from 7:00am to 4:00pm EST. The examiner's supervisor Mickey Yu can be reached at (571) 272-4562 for urgent matters.
